

Name: _____

Jimmy is drawing a pretty picture. He wants you to draw the same picture that he has drawn. First, he wants you to draw a large square inside the rectangle above. Draw this square right in the middle of the rectangle, near the bottom. Next, he would like you to draw a triangle at the top of the square. Make sure your triangle's base fits the top of the square exactly. Then, he wants you to draw a rectangle inside the middle of the square, at the bottom. This rectangle has to be longer going north and south, than east to west. To the right of the square he would like you to draw a big tree. He wants you to draw two apples in the tree. In the left hand corner of the drawing space, he wants you to make a sun. He would like you to draw eight lines coming from the sun to show the rays of the sun. To the right of the sun, he wants you to draw three clouds. When finished, your picture should look just like his picture. Now, add whatever you would like to add to the picture and color it.
